

The World of the Future

In 2125, the internet no longer exists. It has been replaced by a powerful invention : the Memorypods. This small silver device allows people to buy, sell and live other people's memories. You can upload your best moments or download someone else's life into your mind.

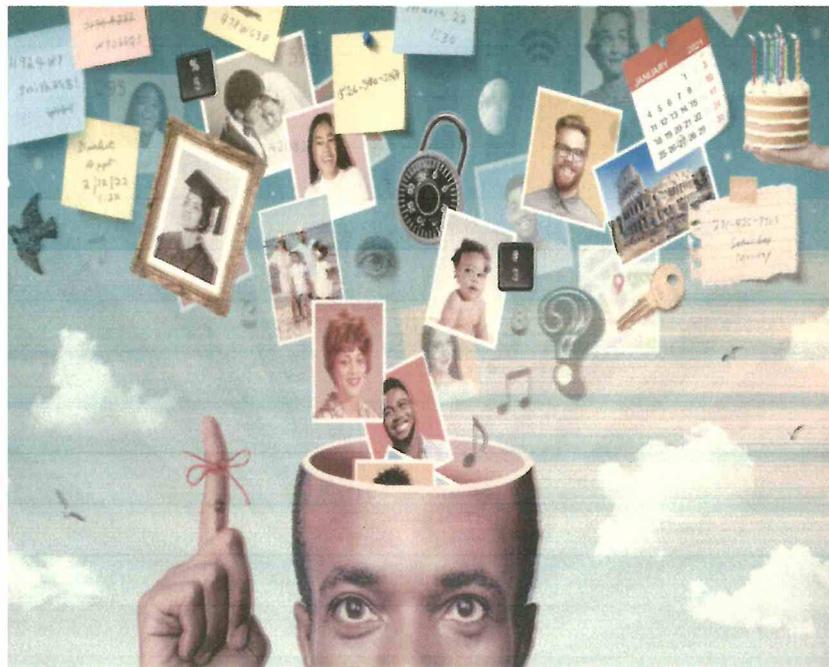

The world is cleaner but colder. Streets are full, yet silent. People walk with empty eyes, experiencing lives that aren't theirs. A teenager laughs at a birthday she never had. A businessman feels proud after winning a war he never fought.

As a result, people stop chasing dreams. They choose perfect memories over their imperfect real life. Although some say the technology increases empathy, others fear it creates confusion and emotional emptiness because memories shape who we are. Sharing them too widely makes our identity fragile.

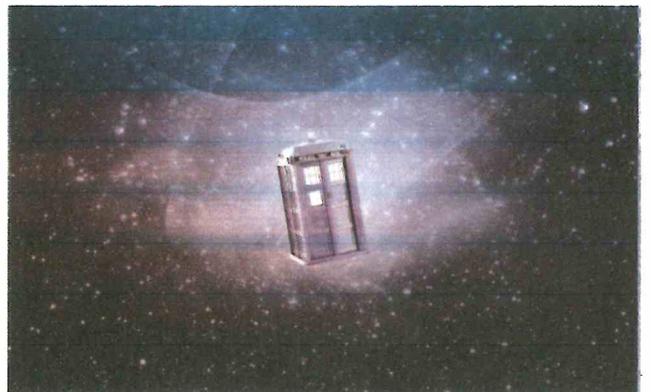

Some resist. A small group - called the "true lifers" - refused to use Memorypods . They say pain and joy must be earned, not downloaded. But society sees them as old-fashioned and foolish.

In the world, technology doesn't just change life. People are more connected than ever but feel more alone .

And yet, no one dares to give it up.

The World of the Future

Today, in Twenty-fifty, the world is no longer the same as it was twenty-five years ago. Indeed, two scientists discovered the possibility to time travel.

Before telling it to everybody on this planet, countries created laws to control its use avoiding the world to be worse as before.

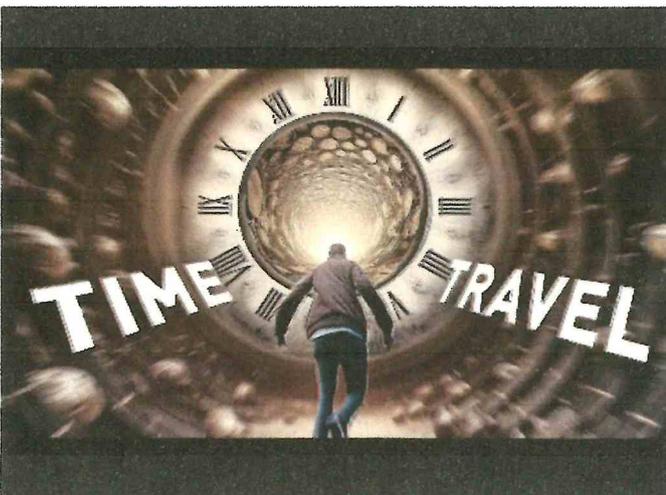

This technology is used as easily as driving a car. It works thanks to gamma rays and the speed of light. We pass through a portal made of carbon which, thanks to electric fields, project the individual to the era he wants. Nevertheless, we can't stay more than thirty minutes. Moreover, it is impossible to travel to the future, only in the past.

People first didn't react well because they were afraid of the use that could be done with this technology like changing the course of History, killing people, playing and winning lotteries ... But world leaders create laws all the time and limit the access to this technology only for historical studies, cultural studies or disasters like avert wars, natural disasters.

People are then more educated and more responsible than before because they know now what a war or a conflict can produce.

Moreover, they are able to learn directly by going with a time portal to the past period they want.

Of course, some criminals try to use time travel to do bad things, but the time police is able to stop them.

The Land of Watches

- Hello , today Im going to take you into a world completely different from ours.
- This world is called « The land of watch ~~es~~ ».
- In this world , every person has a teleportation watch.
- To explain in details : this watch has more features than a normal watch : you can check the time , call people , send messages, play many different games and most importantly, teleport !
- With this new invention , we can teleport wherever and whenever we want easily .
- To teleport ,it's simple , just click a button on the watch and set your position , then choose where you want to teleport.
- The teleportation time take less than one minute.
- This watch is a very good invention , but it brings a lot of bad things , for example : the battery drains very quickly and above all , it takes a long time to charge (fifty minutes)!
- This creation was invented in 2100 and since this invention, people have been happier.
- In conclusion , this watch is the best invention in the world ! Everyone is happy , children and adults.

NeuroMind : a world of technology !

In a new world, a city is alive with the hum of new technology which is NeuroMind. It is better than all of technologies because it allows you to connect humans brains to computers.

NeuroMind is more amazing than Apple, IBM, ... because technology has progressed.

Now, people with disabilities can live independently thanks to NeuroMind. This technology transforms society through a learning method that makes possible to suppress school.

NeuroMind is really a magical technology .

But there is not always good in technology.

And unfortunately NeuroMind has disadvantages.

It affects human relationships which are really complex, and not good or bad.

Moreover, human creativities are destroyed.

Many people lose their jobs which are replaced by NeuroMind.

Society is more dependent on this technology.

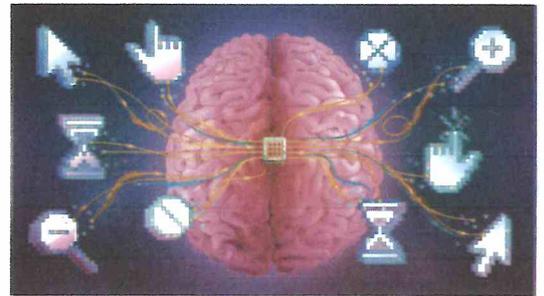

From three years old, kids can have NeuroMind if their parents say "yes".

The Government has legal access to the privacy of citizens.

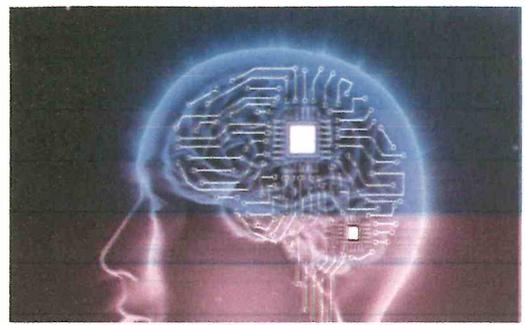

The kids who are two years old are alone because their parents are addicted to this new technology.

But there are also still a of people who resist in this world with advanced technology .

NeuroMind is really good if you use this technology correclty and with attention .

THE DREAMLINK by Haniya Vignol 4°1

In the future, people use a new technology called Dreamlink.

It is a small chip in your head. It lets you talk with your friends and see people in your dreams, play games and learn new things when you sleep.

Life is very different now. People don't use phones or computers anymore because Dreamlink is faster. Students study while they sleep and school is shorter than before.

Dreamlink helps many people feel happy because they can share good dreams. Some people don't like it. They think it is more dangerous than the Internet because other people can enter their dreams.

The world is safer than before because Dreamlink can help calm angry people.

Indeed, doctors use it to help sick people. But some "dreams' hackers" try to control other people's dreams.

Dreamlink changes everything. It makes life easier, but it also takes some freedom away.

In this world, they are also autonomous cars.

The autonomous car is just for the rich of the city.

In this world, you can find the Minotaur, the Chimera, and other mythological animals as pets, we can see them in the black forest.
